Background

The Federal and State Records of Decision in December 2000 for the Long-Term Interagency Bison Management Plan for Montana and Yellowstone National Park (IBMP) were the result of extensive deliberation and legal proceedings that yielded an unprecedented agreement amongst federal-state agencies (National Park Service, USDA Forest Service, USDA Animal and Plant Health Inspection Service, Montana Department of Livestock, and Montana Fish, Wildlife and Parks). Under the IBMP, these agencies harness their respective skills and operational resources to work cooperatively within an adaptive management framework to conserve a wild, free-ranging bison population while concurrently protecting against transmission of brucellosis from bison to cattle.

Partner agencies are committed to the adaptive management framework of the IBMP, as signified by their signing and publication of an adaptive management plan on December 18, 2008. The plan was the result of a series of seven, two-day working meetings that occurred between August and December, 2008. Tribal members—the Nez Perce, Confederated Salish and Kootenai, and the InterTribal Buffalo Council—were invited to join the deliberative table beginning at the November 2009 Partner meeting.

The IBMP meetings allow the Partners to continue progress toward meeting their shared goal of conserving a wild-free-ranging bison population while concurrently protecting against transmission of brucellosis from bison to cattle. To accomplish this goal the partners plan to meet several times each year in public forum to consider prevailing conditions and review collected data, and then develop and apply short- and long-term adaptive management adjustments to the IBMP.
